

# INDUSTRIAL HYGIENE TECHNICIAN COURSE

## TECHNICAL TRAINING WORKSHOP

Training and development are essential to increasing performance, enhancing safety and cultivating human capital. However, too often times certification and training courses interfere with workflow and are too sparsely scheduled throughout the calendar year; resulting in missed opportunities to capitalize on strengthening ones effectiveness in the workplace.

In response to this reality, Golder Associates and Blue Heron have coordinated an Industrial Hygiene Technician training seminar covering a range of topics (as seen below). We gladly continue to offer these Training Bundles in to satisfy workplace demand, as well as our commitment to educational health and safety training.

For additional details regarding our Training Programs visit our website ([www.blueheronenv.com](http://www.blueheronenv.com)) or contact Nathan Towsley via phone, fax or e-mail ([ntowsley@blueheronenv.com](mailto:ntowsley@blueheronenv.com)).

## BLUE HERON TRAINING CENTRE SEPTEMBER 7<sup>TH</sup> - 8<sup>TH</sup> 2010

### WHY AN INDUSTRIAL HYGIENE TECHNICIAN COURSE?

- ◆ Develop a pool of qualified IH sampling technicians/field staff
- ◆ Expand/diversify range of skills of staff; provide juniors with additional tools, career options
- ◆ Decrease time to execute IH projects (due to unavailability of staff)
- ◆ Improve quality and standardize the way data is collected (data representativeness, reliability, interpretation), to improve decision-making
- ◆ Improve workplace health and safety
- ◆ Increase worker satisfaction with sampling process

# SEPTEMBER 7<sup>TH</sup> - 8<sup>TH</sup> 2010

## LEARNING OBJECTIVES

By the end of this course you will be able to:

- ◆ Appreciate what's involved in technical preparation for work, and how to do it, where to obtain materials, supplies, services
- ◆ Describe how to initiate, conduct and close the sampling program
- ◆ Analyse an operation and know what to watch for from a process and handling point of view (visual observation of person/actions/tasks/env. and existing controls)
- ◆ Analyse exposure data, correlate with visual observations and interpret against regulatory standards
- ◆ Appreciate the importance of and how to maintain quality data (field notes, calculations, qualified laboratories, peer and senior review)
- ◆ Recall typical hazards associated with work and work sites, typical hazard controls; refresh on need to do worksite hazard assessment each day
- ◆ Articulate nature and goal of sampling to workers, their impact on data quality, and our role as unbiased assessors of the workplace, while being patient, respectful, constructive
